1. OVERVIEW

This document describes the resolutions available via HTTP for Axis Network Video products, in the formats JPEG, MJPEG and, for products using firmware version 4.xx, also Bitmap. Note however, that not all resolutions are available in BMP format, and also that not all resolutions can be rotated. These limitations are described in each product's firmware release notes, which can be found at the [product's support page](#).

Resolutions can be requested via HTTP according to the [Axis HTTP API](#);
In JPEG format; `http://myserver/axis-cgi/jpg/image.cgi?resolution=<resolution>`,
in MJPEG format; `http://myserver/axis-cgi/mjpg/video.cgi?resolution=<resolution>`,
or in Bitmap format; `http://myserver/axis-cgi/bitmap/image.bmp?resolution=<resolution>`.
The supported resolutions are described in the table below.
